Looking at important trends and developments that will determine the future of society and the professional field, in this workshop you will learn what international competences are and experience in person how intercultural dimensions influence all kinds of professional situations, including the ones at home.	Eveke de Louw <i>The Hague University of Applied Sciences</i>	A2.35

<p>13:15–14:45 <i>Workshop round 1</i></p>	<p>Dealing with intercultural challenges in globalized environment</p>	<p>In the current globalized world, HE students should be equipped with many transversal skills and competencies for their future careers if they want to successfully join the international job market. Indisputably, developing intercultural communicative competence (ICC) belongs to one of the key areas that greatly contribute to the understanding of diversity as a natural human process that has a favourable impact on the perception of the world by an individual and/or a group of people. The workshop will focus on hands-on practice of selected tasks to provide you with deeper insight into ICC. You will learn to:</p> <ul style="list-style-type: none"> • better understand your cultural “selves”, • share knowledge and best practice, • analyse an intercultural critical incident, • find tips for reading and watching. 	<p>Monika Hrebackova & Jana Zverinova <i>School of Business UCT Prague</i></p>	<p>A2.61</p>

Margie Kessler & Crystal Hassell <i>Network Kaleidoscopia</i>	A2.47
15:45–17:15 <i>Workshop round 2</i>	Critical thinking	Critical thinking finds itself at home across all subjects and specializations; however, it seems particularly useful in situations when it comes to arguing, persuading, or simply communicating and conveying meaning. When approached honestly, critical thinking is not a matter of exchanging opinions, verbal juggling, or clever sophistry but rather a survival strategy for the modern “post-truth” world of global, inter- and trans-cultural cultural encounters and diverse international and intercultural environments. Combining hands-on approach with core theory, the workshop will familiarize the participants with the essentials of critical thinking – including, argumentation theory, modes of persuasion, and logical fallacies –, making them not only better critical thinkers but also more efficient communicators for the (post-modern world).
